About The Ephemeris

- The geo-centric *Nirayana* position of Grahas, based on true Chitrapaksha Aynamsha, belongs to 05:30 IST or 00:00 UT/GMT and that may easily be interpolated for any epoch by using daily motion of Grahas and the Logarithms. These longitudes could fairly be compared with the same given in any standard ephemeris.
- The heliocentric (seen from the centre of the Sun) and the Topo-centric positions (seen from any specified location) of Grahas are not required for day-to-day practice. Maximum difference between geocentric (भूकेन्द्रिक) and topocentric (भूपृष्ठीय) Grahas is as follows: Sun- 09", Moon- 62', Other Planets- 01'. Except the rising lagna, daily rising and setting of celestial objects, etc., all other co-ordinates are globally accepted in geo-centric terms only.
- Sidereal time for 00:00 LMT(error limited to 01.2 S) pertaining to the central station of India, is given. For finding the ascendant for any other location on the globe, local correction is to be applied as shown in the 'Mishra's Nirayana Tables of Ascendants' for 24° *Ayanamsha*. Using LMT is a must for S.T. calculation.
- In the Panchanga section, the ending time of all five elements is given in IST useful for entire Indian region without any correction. For any foreign country, apply Time-Correction for the country under consideration to the IST.
- *Tithi-Kshaya* and *Vriddhi*, i.e., relate the sunrise in Delhi NCR area. Elsewhere the same should be considered according to the sunrise of the place in question without altering the ending of the Panchanga factors.
- For example, the Tithi, etc., ending at 09:30 in India and Srilanka, for Nepal at 09:45 (+15m), in Bhutan and Bangladesh at 10:00 (+30 m), in Pakistan at 09:00 and in London at 04:00 (–05 h 30 m) according to their standard time.
- Karana (a half of a Tithi) and the Anandadi Yogas are shown which operate at sunrise. After that the next in natural order operates.
- Information in the Lagna tables relates to the entire NCT (राष्ट्रीय राजधानी क्षेत्र) region. For beginning of Lagnas and ending of Tithi, etc., seconds below 30 are ignored, while the same 30 or above are rounded off to a minute.
- The sunrise and sunset relate to the centre of the Sun (*ardhabimbodaya*), i.e., astrological rising and setting, applicable for computing *Ishtakaala* or epoch for the four metropolitan cities of India. Separate tables for knowing the same for any locality are also given.
- Rahu mean and true are given where the true Rahu stationary along with the OOB Grahas are shown bold.

Chitrpaksheeya Ayanamsha

By adding 50.3" yearly motion to the previous mean Ayanamsha, we get Mean Ayanamsha for the following year. For true value of Ayanamsha, we have to apply *Nutation* correction based on Nirayana True Rahu as shown in the table below. And that is also further corrected by Nutation × 0.658".

Mean motion: 100 years = 01°23.8', 10 years = 08.38', 1 year = 50.3", I month = 04.10", 1 day = 0.14"

Considering 285 AD as the zero Ayanamsha year, mean Ayanmasha on Dec. 31, 2022= 24°10.7' (or 24°10'42)

(decimal value × 6 = arc minutes / seconds as the case may be)

Niryana true Rahu on that day is 01 17°33' and the Nutation in the year is negative 15"(table below), further corrected (15"× 0.658) = 09 87" (10")

True Ayanamsha January 1, 2024: 24°10'42" *minus* 10" = 24°10'32

Nutation (घूनन) Correction

Instrument: Nirayana True Rahu

Final correction: Correction × 0.658"

True Rahu	Corr Negative	True Rahu	Corr Negative	True Rahu	Corr. Positive	True Rahu	Corr Positive
11 06°	00' 00"	02 21°	00'16"	05 21°	00' 05"	08 21°	00'16"
11 21°	00' 05"	03 06	00'15"	06 06°	00' 09"	09 06°	00'15"
00 06	00' 09"	03 21°	00' 12"	06 21°	00' 12"	09 21°	00' 12"
00 21°	00' 12"	04 06°	00' 09"	07 06	00'15"	10 06	00' 09"
01 06°	00'15"	04 21°	00' 09"	07 21°	00'16"	10 21°	00' 09"
01 21°	00'16"	05 06°	00' 00"	08 06°	00'17"	11 06°	00' 00"
02 06°	00'17"	...	...	...	...	...	...

True Ayanamsha (January 01)

2022	24°09'38"	2023	24°10'32"	2024	24°11'27"	2025	24°12'23"

Lahiri Ayanamsha is the Chitrapaksheeya Ayanamsha indeed admitted by Mr. Lahiri himself.

Vedic Solar Months, Seasons (Ritu)

Month	Ritu	Begins	Month	Ritu	Begins
Tapasya (Kumbha)	Winter (*Shishir*) II month	Jan. 20, 19:37	*Nabhasya* (Simha)	Rains (*Varsha*) I month	July 22, 13:14
Madhu (Meena)	Spring (*Vasanta*) I month	Feb. 19, 09:43	*Isha* (Kanya) (Sharat I month)	Autumn (*Sharat*) I month	Aug. 22, 20:25
Madhava (Mesha)	Spring (*Vasanta*) II month	Mar. 20, 08:36	*Oorja* (Tula)	Autumn (*Sharat*) II month	Sept. 22, 18:14
Shukra (Vrisha)	Summer (*Grishma*) I month	Apr. 19, 19:30	*Sahas* (Vrischika)	Early Winter (*Hemanta* I month)	Oct. 23, 03:45
Shuchi (Mithuna)	Summer(*Grishma*) II month	May 20, 18:29	*Sahasya* (Dhanu)	Early Winter (*Hemanta II* month)	Nov. 22, 03:26
Nabhas (Karka)	Rains (*Varsha*) I month	June 21, 02:21	*Tapas* (Makara)	Winter (*Shishir*) I month	Dec. 21, 14:50

Ayana & Seasons (*Ritu*) commence with the *Sayana Samkranti* of the Sun. Vedic names of months have implied meaning precisely pertaining to the change of the six seasons in Indian sub-continent.

*Sidereal: period of one complete circuit of the Sun (for Moon, of Earth) *Synodic: period between two Newmoons (for Moon), for Grahas between two conjunctions

Kirtikant Sharma Collection, Najafgarh

CC-0. In Public Domain. Digitization by eGangotri

Duration of Daylight at latitudes (N&S) hours & months

Latiitude	0°	31°	49°	66.5°	67.4°	69.8°	78.2°	90°
Duration	12 h	14 h	16 h	24 h	1 month	2 months	4 months	6 months

In the northern hemisphere days and nights of equal length (12h each) on March 21-22 and Sept. 22-23, the longest day on June 21. The day-duration gradually increases from Dec, 21-22. These are the four cardinal dates of a year.

Grahas Out of Bounds* (OOB) अतिक्रान्त ग्रह 2024-25

Moon	Mars	Mercury	Venus
Shown bold on the month pages	2024 Jan. 01 – Jan. 22 Sept. 07 – Sept. 19 Dec. 31, 2024 to Apr, 07, 2025	June 12-29 Nov. 06-30 2025 Jan. 09-21	2024 June 11-29 Oct. 26 – Dec. 03

Grahas with Decl. above 23°27' (N'S) are OOB. Sun and Saturn never become so while Jupiter becomes rarely. An OOB Grahas manifests unpredictability in natal & global affairs.

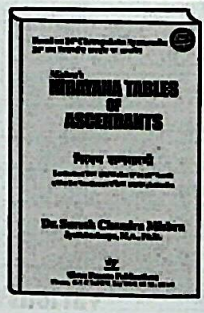
Mishra's

Nirayana Tables of Ascendants

Based on 24° Chitrapaksha Ayanamsha

by

Dr. Suresh Chandra Mishra



For all geographical latitudes from 00°N to 73°

Also useful for Southern Latitudes

1. The basic Sidereal time is used 00:00 hrs which makes the calculation much easier than the same for noon;
2. For benefit of students of highly critical approach, some detailed articles on houses, *Bhava-Sphuta and Chalita Chakra*;
3. Simple method for calculating lagna at foreign countries;
4. Useful for entire 21st century and many future years;
5. Chitrapaksheeya true Ayanamsha till 2400 AD;
6. Detailed discussion on Ayanamsha and its calculation for any desired year;
7. Simple tables for knowing precise lagna without Sidereal time; direct with the watch-time;
8. Obtaining the Sidereal time for future centuries;
9. And all other required fields for arriving at the lagna for any locality on the globe.

Price: 299 $30

Eclipses (ग्रहण विचार) 2024-25

Timings relate to earth, not to any particular locality. A lunar eclipse occurs when the Bhuja (Sun minus Rahu) is below 09°; till 13° no certainty. For solar eclipse, the upper limit is 13°.

Basic Coordinates मूल घटक	Total Solar Apr. 08 Mon 2024	Partial Lunar Sept. 18, Wed 2024	Annular Solar Oct. 02-03, Wed 2024	Total Lunar Mar. 14, Fri. 2025	Partial Solar Mar. 29, Sat 2025

Combustion (ग्रह लोपदर्शन) of Grahas, 2024-25

Graha	Sets	Rises
Jupiter	May 07 2024	June 02, 2024
Venus	April 30, 2025, March 19,	July 06, 2025 March 23
Mercury	February 10, April 01, June 03, August 11, September 15, Nov. 29, 2025, January 21, March 16	March 13, April 20, June 25, Aug. 26, Oct. 20, Dec. 11, 2025, February 25, March 31
Mars	2024 September 24,	2024 January 16,
Saturn	2025 February 23,	2025, March 29

The blemish of combustion of Jupiter & Venus extends for 3 days both sides. Mars, Jup, Sat, Mer. R & Venus R set in the West and rise in the East. Dates are for Delhi NCR and nearby states.

Retrogression (वक्री मार्गी) of Grahas, 2024-25 (IST)

Graha	.Date & Time R	Date & Time.D
Mercury	(Dec. 13, 12:38) (Apr. 02, 03:45) (Aug. 05, 10:26) (Nov. 26, 08:12) 2025 (Mar. 15, 12:16)	(Jan. 02, 08:38) (Apr. 25,18:23) (Aug. 29,02:43) (Dec. 16,02:26) 2025 (Apr. 07, 16:38)
Mars	(2024, Dec. 07,05:04)	(2025, Feb. 24, 07:31)
Jupiter	(2024, Oct. 09, 12:36)	(2025, Feb. 04, 15:11)
Venus	(2025, Mar. 02,06:07)	(2025, Apr. 13,06:33)
Saturn	(2024, June 30,00:38)	(2024, Nov. 15,19:50)

The beginning and ending moment of R or D motions are known *Stationary* (*Kutila Gati*) The Graha then manifests minimum of its effects, either good or adverse..

Rising and Setting of Agastya (अगस्त्य तारा लोपदर्शन) 2024

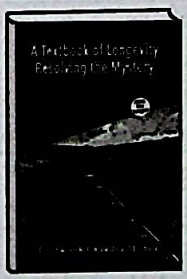
A Textbook of Longevity: Resolving the Mystery

Dr. Suresh Chandra Mishra



The book efficiently deals with the complicated area of longevity calculation and elucidates all the twelve popular methods of calculation with real example horoscopes with detecting their authenticity and correctness. The book makes one understand:

1. The Mishraayu Redefined producing highly reliable results;
2. For the first time, detailed discussion on the Taazikaayu from a rare classic that seems superseding the twelve popular techniques;
3. Many less-known methods of longevity;
4. Simple explanation of Kaala Chakraayu, Dashaayu and Nakshatraayu;
5. All methods elucidated with simple 'Ready to Use' tables exempting you from tedious calculation work;
6. Practical application of methods on more than 60 actual horoscopes;
7. Powerful Vedic remedies making the one escape from untimely physical and mental trauma and that all renders fuller protection to the span sanctioned by the Grahas;
8. A critical and logical open-end discussion on the area that you will love to read time after time.

Price: 499 $49

Apply correction +3.5 minutes for rising and −3.5 for setting = astrological timings

Kirtikant Sharma Collection, Najafgarh

CC-0. In Public Domain. Digitization by eGangotri

Illustration: Find sunrise and sunset at Delhi on March 28, 2024:

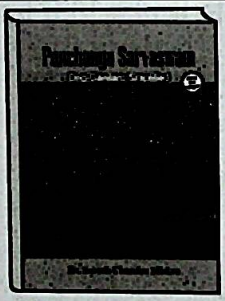
Form the tables above, the timings are: rising- 06:16, setting- 18 37 (upper limb or visible rising and setting)

Astrological sunrise: 06:16 + 00:04 = 06:20 IST

Astrological setting: 18:37 – 00:04 = 18:33 hrs IST (same in our ephemeris)

Following tables, covering almost entire Indian region; (10° to 35° latitudes) show the astrological Local Mean Time (LMT) of rising and setting of the Sun and are meant only when you seek the same for any other location not found in the tables above. Take proportional value for any intermediate latitude and date.

Here you will have to apply Standard Time correction (available in the ephemeris) after reversing the sign, i.e., negative is added and positive is subtracted.



Panchanga Sarwasvam

Dr. Suresh Chandra Mishra

Study of Jyotisha in ancient India, especially of the Siddhantic portion, actually formed the sole basis of Ganita including Arithmetic (Amkaganitam), Algebra (Beejaganitam) Geometry (Kshetramiti) and Trigonometry (Trikonamiti). All sages and seers, in ancient India, were the astronomers first and after the mathematicians. Requirement of astronomical affairs alone inclined them to mathematical calculations and to scale new heights in the different spheres of math. In this work, the Drigganitam that is the Siddhantic portion of Jyotisha is simplified where a new student himself can also compute the Ephemeris or a Panchanga. The book contains easy methods of Calculating:

- The longitudes of Grahas, comparable to any authentic ephemeris without Ahargana and their mean position. This all elucidated with the help of the Panchanga or ephemeris of the previous year with current-date examples;
- Solar Samkrantis, Nirayana and Sayana, along with the Ayana-Gola and Ritus;
- All five components of the Panchanga (Tithi, Nakshatra,Yoga, Karana) valid for entire India;
- Knowing Kraanti (declination) and Shara (latitude) through a simple method;
- Retrogression, combustion, daily rising and setting of Grahas;
- Solar and Lunar eclipses with date and time including visibility in India;
- Calculation of Kraantisaamya and a Critical study of Chitrapaksha Ayanamsha;
- Brihaspati Samvat, ten Adhikaris of the Samvat, fixation of Vrata and Parva and Marking the Muhurtas. Sunrise and sunset as well as lagna calculation for entire India;
- A simple way along with an annotation on the twelve houses;
- Date calendar for centuries, Ketakeeya Ahargana and knowing of the Mean Grahas for any year. All other miscellaneous information useful for Panchanga calculation;
- Each and every topic is exemplified for the year 2023-24;
- Advance longitudes of Grahs, eclipses, retrogression and combustion for many future years;
- Practicing the calculation with the given method, certainly will make you inclined to the Ganita branch of Vedic Jyotisha. And the interest in the domain of Siddhanta Jyotisham will certainly enhance. A Textbook for beginners: Gateway to Astronomical calculations;
- Simple addition, subtraction, multiplication, division, etc., are sufficient to move forth.

Price: ₹ 899 $89

Illustration: Find astrological sunrise and sunset at Chennai on March 28, 2024, Latitude-13°04' Form the tables above:

(Timings at 10° = 06:03 and 18:07) (Timings at 15° = 06:02 and 18:08), difference 01 m or 60 seconds

Interpolation factor = 13°04 *minus* 10°00' = 10°+ 03°04' (with decimal value – 3.6)

Proportion for 03° = 60 × (3.6/5) = 43 seconds

At two successive latitudes, rising time decreases, so 06:03:00 minus 43s = 06:02:17 rising LMT

Setting increase so that is = 18:07:43 LMT

Standard time correction for Chennai = *minus* 09 m, that with reverse application is:

06:02 + 00:09 = 06:11 IST is the rising and 18:08 + 9 m = 18:17 IST is the setting (both astrological)

Duration of Lagnas for Certain Cities ***(hour:minute:second)***

Tripushkar, etc. (त्रिपुष्कर द्विपुष्कर गुरुपुष्य रविपुष्य योगाः) Yogas

Yogas, viz. *Dwipushkara* and *Tripushkara* are recommended for fresh investments, purchase of assets, opening a new business and studies. As the naming of the Yogas suggests, the effect of an auspicious activity is doubled in *Dwipushkara* and tripled in *Tripushkara*. These are highly positive at birth.

Amritsiddhi is prohibited for *Graha Pravesha* on Tuesday, for journey on Saturday, for wedding on Thursday. The Yoga turns into a *Visha Yoga* on Tithis 5, 6, 7, 8, 9, 10, 11, respectively coinciding with Sunday to Saturday. Certain nkashatras coinciding with certain weekdays form Saarvartha Siddhi.

A *Ravi Yoga* can sterilize a number of blemishes existing otherwise at *Muhurta* (दोषसंघविनाशकाः).Hence, are supposed to be more powerful than a *Sarvarth Siddhi Yoga*. The Yoga is also suitable for conceiving (IVF/IUI also) a child too. From the Sun, Moon in nakshatras 4,6,9,10,13,20 constitutes the Yoga.

*Likewise the Vedic calendar, the Chinese Lunar calendar also consists of 12 months and an intercalary month after a fixed interval. The year begins at the first New-moon after the Sayana solar ingess in Kumbha. The day may fall between January 21 to February 19. Surprisingly the beginning of the year corresponds with the*Magha Shukladi* day of the *Vedanga Jyotisha* year. The cycle of twelve years is repeated up to 60 years consisting of 5 cycles of 12 years each.

Explainatory Notes (Varshapravesh)

The moment when the longitude of the Sun becomes equal to that of natal sun, is the moment of Varshapravesh. For quick and simple calculation, write down the day (0 or 7 for Saturday, 1 for Sunday, etc.) and time of birth. Add the figures given against the age (completed years) of the native. The result gives us the day and time of Varshpravesh.

A child is born on August 23, 2008, Saturday at 7:34 hrs. the natal Sun is 4:06:20:29.

To find out the moment of Varshpravesh in 2011, we add 0 day 7:34 hrs. to the figures given against the year 3, i.e. 3:18:27.5. The result reveals the day Tuesday (7 + 3 = 10 – 7 = 3) on 23.8.2011 and time 26:01:30 hrs. i.e. 2:01:30 a m. after midnight The calendar date becomes 24.8.2011. Actually the equality of longitudes occurs at 01:58 a m with some ignorable difference.

EXAMPLE: The natal moon is 0:24:22:59 and in the table 1, we get 3 years and 6 months dasha balance of Venus against 24 d 20 m. For excess of 2 minutes 59 seconds rounded off 3 kala or minutes we get 27 days to be subtracted from the above. Finally, the balance of Venus dasha is 3 years 5 months and 3 days at birth (vide table infra).

Explanatory Note (Latitude & Longitude)

The central Meredian of India has been selected at a place falling at 82°E30 longitude and 23°N11 latitude (latitude of Ujjain). The local mean time (LMT) of this location (5 h 30 m ahead of Greenwich, i.e., GMT) has been adopted as the Indian Standard Time (IST).

Correction to get LMT is obtained at the rate of 1° = 4 minutes from the central meridian of India, viz, 82°E30 longitude positive for west and negative for east. Similarly the correction to Indian Sidereal Time is obtained at the rate of 1° = 0.66 second. These corrections are required to arrive at the Lagna for any given point of time..

After 30.9.1951, in Bangladesh the standard time is observed 6h ahead of GMT. The same in Pakistan is 5h ahead of GMT. Hence, standard time of Bangladesh is obtained by adding 30m to IST and for Pakistan, the same is obtained by diminishing 30m from IST.

Explanatory Note (Logarithms)

Rule: Add proportional log. of planet's daily motion of log. of time from 5-30 a.m., IST and the sum will be the log. of the movement required. If the time is after 5-30 a.m., add this movement to the given position of planet, but if before subtract, and the result will be the planet's true place at the given moment (if retrograde, subtract for add). For accurate position of Moon, interpolation correction is to be taken.

For example longitude of Moon is required on any given date at 12h 28m a.m. IST. Longitude of Moon on that date at 5.30 a.m. is 10s11°02'. Daily motion of Moon on that date is 14° 36'. Log. of 14° 36' is 0.2149. Time in question the event from 5h 30m a.m. is 6h 58m, log. of which is 0.5372. Sum of these two is (0.2159 + 05372 = 0.7531) which is log. of 4°14'. The required longitude of Moon is, therefore, 10s11°02' + 4°14' = 10s15°16' i.e. Kumbha 15°16'.
